Profile

I'm a dependable Aircraft Mechanic with more than 10 years of experience in repairing, diagnosing, and overhauling aircraft systems and engines. I'm very detail-oriented with the ability to spot problems quickly and complete any repairs needed to return the aircraft to service.

Experience

Aircraft Mechanic - Company / Location

MONTH YEAR - Present

- Examine each vital aircraft component, like hydraulic systems and landing gears, to locate various problems, including leaks and cracks.
- Examine the fuselage, wings, and tail for corrosion, distortion, and concealed cracks by employing X-ray and magnetic inspection equipment.
- Complete all the repairs and maintenance tasks to company and FAA standards.
- Utilize a variety of equipment and precision instruments to review components such as turbine blades for cracks, corrosion, and any other issues.
- Meet tight repair deadlines to ensure no service disruption and planes depart on schedule.

Aircraft Mechanic- Company / Location

MONTH YEAR – MONTH YEAR

- Used measuring instruments to inspect parts.
- Assembled and installed aircraft systems, including plumbing, mechanical and hydraulic.
- Refueled, cleaned, and changed oil lines in aircraft servicing.
- Used work order reporting system to maintain record accuracy.
- Ensured supervisors are notified of faulty operations and defective materials.

Project Experience

- Ran a team that was in charge of inspecting equipment before take-off to ensure there were no problems.
- Organized meetings to ensure all employees completed maintenance work to company and FAA standards.
- Worked with a team that was in charge of repairing old equipment so that it could be reinstalled into aircraft.
